- Acne
- Scars
- Sunspots
- Freckles
- Wrinkles
- Whiteheads
- Blackheads
- Uneven Pigment
- Skin Rejuvenation
- Stretch Marks

## MICRODERM II

Diamond Microdermabrasion

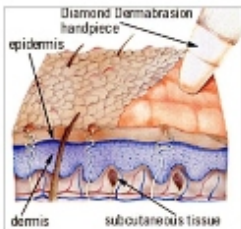

Diamonds really are a woman's best friend

### Peel away the years:

We all want to look young but inevitably there are factors that slowly take our youth away. The sun, stress and bad conditions play a key factor in the aging process. The key formula with the Diamond Microdermabrasion system is to slowly remove layer by layer of dead skin, uneven pigment and minimize scars, leaving behind what should actually be there, your healthy radiant natural skin.

### How diamond microdermabrasion works:

Diamond Microdermabrasion actually works with real industrial grade diamond chips secured onto the hand piece. The gentle motion of the diamond hand piece over the skin releases the dead skin, gently removes unwanted pigment like sunspots, old age spots and decreases the visibility of scars. All this combined with the vacuum system will gently remove impurities from your skin.

### Why diamond microdermabrasion instead of crystals:

Crystal Microdermabrasion is the method of blasting your skin with tiny crystal particles. This method is messy as many crystal particles become embedded into your skin. Many studies have also shown that it is also not very safe especially with the aluminum oxide crystals. Diamond Microdermabrasion is not messy, 100% safe, not painful and the results are almost instantaneous.
